

Depot to shelf, in one workspace

ClickSaleForce is the trading desk for Kenyan field sales: capture the customer, the GPS, the stock, the van, the cash, and the audit trail without stitching five tools together.

Field + HQ
One workspace

2FA + audit
Every change

Kenya GPS
Place of sale

Daily backup
Admin reminder

Field sales

Know-your-customer capture, GPS place of sale, and line items on the web desk or the Android agent app.

- Sales register, Kenya map, and filterable Excel/PDF reports
- Agent push notices to the field phone
- Two-step edit or disable of a completed sale, with a mandatory reason
- Disabled sales leave reports and restore stock

Stock and suppliers

Every SKU stays tied to its supplier, price schedule, and quantity still on the shelf.

- Product catalogue with PNG images and dated buy/sell prices
- Supplier invoices and agent commission plans
- Unsold stock valued at cost and sell price, filtered by supplier or SKU

Fleet

Vans and trucks that move new lines from the depot onto the shelf.

- Vehicle register, routes, and geofence alerts
- Fuel, telematics flags, and vehicle invoices
- Agent assignments so a sale sits on a named route

ClickSaleForce • the rest of the desk

Finance, people, and control sit on the same login as the van sale.

Money

What was sold, what is still in stock, and what hit the bank.

- General ledger, cash book, and bank / M-Pesa reconciliation
- Payroll runs and PDF payslips
- Office expense register

Control

Admin, manager, and agent desks with a paper trail.

- Roles, two-factor email or SMS, and idle web logout that returns you to the last page
- Enable or disable a user without deleting history
- Full audit trail and error log
- Admin SQLite backup download with a daily reminder until today's copy is taken
